

Guileo AI

Voice-first Customer Intelligence Platform for restaurants, clinics, and service businesses.

Every phone call, WhatsApp message, and SMS becomes a structured customer profile with explicit consent — feeding marketing automation, ad audiences, and predictive ML that increase repeat business and reduce churn.

Operating company

Tribeca Global Inc.

Product

Guileo AI

First market

United States

First tenant

NYPDQ · Astoria, NY

1. Executive Summary

Guileo AI is a multi-tenant SaaS platform that replaces the front desk with an AI voice agent — and turns every interaction into customer intelligence the business can use.

Independent restaurants, dental and aesthetic clinics, and service businesses all share the same operational pain: **the phone never stops ringing, but they miss 30-40% of calls anyway**. They lose orders, appointments, and customers to competitors who happen to answer first. They also have no idea who their callers are — there's no profile, no history, no follow-up, no marketing reach.

Guileo AI solves both halves of that problem at once. We provide a 24/7 multilingual AI agent that answers calls, takes orders or schedules appointments, processes payments, and confirms by SMS and WhatsApp — and behind it, a Customer Data Platform that turns every interaction into a unified customer profile with auditable consent. From that data layer we power campaigns, ad audiences, and predictive ML that drive repeat purchases and reduce churn.

3
VERTICALS

4
CHANNELS

3
CONSENT TIERS

24/7
ALWAYS ON

The wedge: Voice answering is the immediate, urgent pain. Customer intelligence is the long-term moat. We sell the wedge and own the moat. Tenants pay a fixed monthly subscription; we never take a percentage of their revenue.

1.1 Three vertical products, one platform

Restaurants
Phone & WhatsApp ordering, kitchen dispatch, payment, customer marketing.
Replaces missed-call leakage and DoorDash dependency.

Clinics
Appointment booking, no-show prevention, insurance Q&A, patient CRM. HIPAA-compliant; integrates with PMS.

Services
Salons, law firms, contractors, spas. Calendar booking, lead intake, follow-ups. Lightweight tier, fastest onboarding.

1.2 Why now

- **Voice AI is finally good.** GPT-4o-class models with sub-500ms latency and natural multilingual voices (11Labs Turbo) crossed the threshold of indistinguishability in 2024-2025.
- **Phone volume is rising, staffing is collapsing.** Restaurants and clinics receive 800-1,000 calls per month and miss 30-35% of them. Front desk staff cost \$17-\$45/hour with high turnover.

- **Every player today does part of the job.** Slang.ai answers FAQs but won't take orders. Hostie takes orders but has no marketing layer. Arini does dental but no other vertical. **No one has stitched voice + payments + CDP + marketing + ML into one product.**
- **Privacy regulation is now table-stakes.** LGPD, CCPA, GDPR, HIPAA — owning consent infrastructure correctly is itself a moat.

2. System Architecture

End-to-end view of the Guileo AI platform — from inbound channels to downstream intelligence products.

Multi-tenant from day 1 · Vertical-aware schemas · Consent-gated data flows · Realtime updates throughout

3. System Components

Eight interlocking systems that together form the Guileo AI platform.

3.1 Channels (Input Layer)

COMPONENT	PROVIDER	PURPOSE
Voice agent	Vapi · Deepgram Nova-2 · GPT-4o-mini · 11Labs Turbo v2.5	Inbound phone, takes orders/appointments, processes payment by voice or sends payment link
WhatsApp agent	Twilio Business API + GPT-4o-mini	Inbound chat ordering, two-way conversations, payment links, opt-out keyword handling
SMS	Twilio Conversations	Confirmations, receipts, payment links, marketing (with consent), STOP/PARAR keywords
Web order page	Next.js (per tenant subdomain)	QR-code/link-driven, mobile-first, single-page checkout

3.2 Core Platform

Orchestration · n8n

Channel adapter normalizing voice/WA/SMS payloads. Identity resolution (cross-channel customer linking). Vertical routing (restaurant vs clinic vs service workflow). Tool-call handling for the AI agent.

Consent Layer

3 tiers: *essential* (auto, contract performance), *marketing* (soft opt-in), *intelligence* (explicit consent + value exchange). Every grant/withdrawal stores prompt text, response, channel, IP, and recording/MessageSid as evidence.

Customer Data Platform

Supabase Postgres. 13+ tables: tenants, locations, menu_items, customers, consents, orders, events, conversations, messages, campaigns, predictions, audiences, dsr_requests. Row-level security per tenant. Realtime for live order boards.

Payments · Stripe

Stripe Connect Express for end-customer payments (money goes directly to tenant's account — Guileo never touches it). Stripe Billing for the SaaS subscription itself with proration, dunning, and self-service cancel.

3.3 Downstream Intelligence Products

PRODUCT	WHAT IT DOES	TECH
Campaigns	Automated and ad-hoc email/SMS/WhatsApp campaigns with segment targeting, A/B variants, attribution back to revenue	n8n triggers + Twilio + SendGrid
Performance Ads	Auto-sync hashed PII to Meta Custom Audiences, Google Customer Match, TikTok Events. Lookalike expansion. Gated by intelligence-tier consent.	Node + TypeScript workers
Predictive ML	RFM segmentation, churn probability, customer LTV, next-order timing, recommendation engine. Daily batch jobs.	Python · scikit-learn · lifetimes (BG/NBD + Gamma-Gamma)
Privacy Portal	Customer self-service: toggle consents, download all data as JSON, request deletion. Magic-link JWT, 24h expiry.	Next.js standalone app

3.4 Customer-facing UX (B2B Dashboards)

Each vertical has a tailored dashboard built on the same backend. Same data model, different workflows and language.

- **Restaurants:** Live order kanban (paid → preparing → ready → out for delivery), kitchen ticket emails, optional thermal printer / tablet display, menu manager, customer 360, campaigns, ad audiences.
- **Clinics:** Appointment calendar, no-show prevention reminders, patient CRM with insurance fields, HIPAA-compliant audit trails, BAA portal, PMS integration status.
- **Services:** Booking calendar with provider/staff routing, customer notes, follow-up sequences, Google Calendar / Calendly / HubSpot sync.

4. Three Verticals, One Platform

Same backend, same consent layer, same intelligence products. Vertical-specific UX, vocabulary, voice prompts, and integrations.

Strategic principle: A restaurant, a clinic, and a barbershop have nearly identical operational needs — answer the phone, capture the customer, complete the transaction, follow up. The differences are vocabulary and integrations, not architecture. Building once and adapting per vertical is dramatically cheaper than building three separate companies.

4.1 Guileo AI for Restaurants

The user: Independent restaurants and small chains, especially those losing margin to DoorDash/UberEats and missing peak-hour calls.

Anchor tenant: New York Pão de Queijo, Astoria NY — bilingual EN/PT, 50+ menu items, breakfast through dinner, delivery + pickup.

Specific features

- Bilingual voice agent (English ↔ Portuguese auto-detect)
- Menu management with three tiers: manual, AI-extracted from PDF/image, or POS-synced (Toast/Square/Clover)
- Kitchen ticket dispatch via email, thermal printer (HTTP), or tablet display
- Delivery zone validation, NYC sales tax (8.875%), delivery fee logic
- DoorDash Drive / UberDirect API integration for overflow delivery
- Zero integration with consumer marketplaces (DoorDash/UberEats listings) — Guileo is the direct channel

4.2 Guileo AI for Clinics

The user: Dental, dermatology, aesthetic, and small medical practices losing patients to no-shows and missed after-hours calls.

Specific features

- HIPAA-compliant baseline: BAA signed, AES-256 encryption at rest and in transit, restricted PHI access, audit logging
- Appointment scheduling with conflict detection, calendar integration
- No-show prevention: smart reminders 24h + 2h before, reschedule prompts, deposit collection
- Insurance Q&A (eligibility, coverage details) — answered conversationally by the agent

- PMS integration: Dentrix, Eaglesoft, OpenDental, Curve Dental, Pearl
- Patient CRM with treatment history, allergies, medications fields (PHI-flagged)

4.3 Guileo AI for Services

The user: Hair salons, barbershops, law firms, accountants, contractors, spas, pet groomers, tutors. Anyone who books appointments and answers a phone.

Specific features

- Lightweight tier — least configuration, fastest onboarding (under 1 hour)
- Calendar-first UX: Google Calendar, Calendly, Outlook, native scheduler
- Multi-staff routing (which barber/lawyer/contractor takes the call)
- Service catalog instead of menu
- Lead intake forms, qualification questions, escalation to human
- HubSpot, Pipedrive, Salesforce sync for sales-led service businesses

5. Consent & Compliance

The privacy infrastructure is designed for maximum capture without violating regulation — and is itself a competitive moat.

5.1 The three-tier consent model

TIER	LEGAL BASIS	WHAT IT COVERS	WHEN ASKED
ESSENTIAL	Contract performance	Order processing, delivery confirmations, payment receipts, appointment reminders	Implied — auto-granted on first order/booking
MARKETING	Consent	Promotional messages, special offers, weekly specials, loyalty rewards from <i>this tenant only</i>	Soft ask 1 hour after first order: "want a \$5 coupon for next time?"
INTELLIGENCE	Explicit consent	Personalized recommendations, ML training on de-identified data, ad audience inclusion (anonymized via SHA-256), cross-tenant lookalikes	After 2nd order with concrete value exchange (VIP program, priority delivery, birthday surprise)

5.2 Capture evidence

Every consent record stores enough proof to defend a regulator audit:

- **Voice channel:** recording URL + transcript segment + timestamp
- **WhatsApp/SMS channel:** Twilio MessageSid (inbound) + reply MessageSid (outbound) + IP
- **Web channel:** form submission + IP + user agent + signed JWT trail
- **Self-service portal:** session ID + IP + change diff (granted/withdrawn)

5.3 Regulatory compliance matrix

REGULATION	REGION	APPLIES TO	HOW WE COMPLY
CCPA / CPRA	California, USA	All tenants serving CA residents	Self-service do-not-sell, data export, deletion requests, automated DSR

REGULATION	REGION	APPLIES TO	HOW WE COMPLY
GDPR	European Union	Future EU expansion	3-tier consent, full DSAR, right to erasure, data portability (JSON export)
LGPD	Brazil	Future BR expansion via MUUH Pay	Modeled on GDPR; same controls satisfy both. PT-BR portal copy.
HIPAA	USA	Clinic vertical	BAA signed at onboarding, AES-256 encryption, PHI access logs, encrypted backups, restricted role permissions
PCI DSS	Global	All tenants	Stripe Connect — Guileo never sees card data; PCI scope minimized to SAQ-A

5.4 Data Processing Agreement (tenant ↔ Guileo)

Each tenant signs a DPA at onboarding authorizing Tribeca Global Inc. (operating as Guileo AI) to process their customer data for: (1) service delivery, (2) anonymized aggregate insights, (3) ML training on de-identified data, (4) cross-tenant lookalike audience generation — but **only when the underlying customer also granted intelligence-tier consent**. The two layers (tenant authorization + customer consent) must both exist before any cross-tenant data use.

6. Tech Stack & Required Accounts

Production-grade choices that prioritize speed of iteration and operational reliability.

6.1 Required vendor accounts

VENDOR	PURPOSE	NOTES
Vapi	Voice AI runtime (telephony + STT + LLM + TTS)	Per-minute pricing; one assistant per tenant or per vertical
OpenAI	GPT-4o-mini for agent brain & menu extraction	Cheapest viable; upgradable to GPT-4o on Scale tier
11Labs	Text-to-speech (3 voice options preset, custom cloning add-on)	Turbo v2.5 model · low latency
Deepgram	Speech-to-text (multilingual, smart formatting)	Nova-2 · faster than Whisper for telephony
Twilio	Phone numbers, WhatsApp Business, SMS, sub-accounts per tenant	WhatsApp Business approval takes 1-3 days
Stripe	Stripe Connect (orders) + Stripe Billing (SaaS sub)	USD primary; BRL ready when MUUH Pay launches
Supabase	Postgres + Auth + Realtime + Edge Functions + Storage	Pro plan \$25/mo + usage; Enterprise for HIPAA tier
Vercel	Dashboard + privacy portal + tenant subdomains	Wildcard domain support for *.guileo.ai
n8n	Orchestration (self-hosted or Cloud)	Cloud is faster to start; self-host for cost at scale
Hetzner / Railway / Modal	Workers (ad sync + ML jobs)	Modal best for ML scheduled jobs; Hetzner cheapest for always-on
Resend or SendGrid	Transactional and marketing email	Resend simpler API; SendGrid better deliverability at scale

Ad audience destinations

VENDOR	PURPOSE	NOTES
Meta Business + Google Ads + TikTok		Per-tenant OAuth; long-lived tokens

6.2 Application stack

Frontend Next.js 14 · React 18 · TypeScript · Tailwind CSS · Recharts · Supabase SSR · React Native (kitchen tablet app, future)	Backend & Workers n8n workflows · Node.js + TypeScript (ad sync) · Python 3.12 + scikit-learn + lifetimes (ML jobs) · Supabase Edge Functions for low-latency tasks
Database & Storage Postgres 16 (Supabase) · pgvector for menu/intent embeddings · pg_trgm for fuzzy customer matching · Object storage for call recordings	Observability & Ops Sentry (frontend errors) · Better Stack or Grafana (workers) · Cloudflare (DDoS / rate limit) · GitHub Actions (CI/CD)

7. Business Model

Pure SaaS. Fixed subscription. No revenue share. Clear upsell path through add-ons.

Why pure SaaS: Tenants distrust intermediaries that take percentages (the DoorDash trauma). A fixed monthly fee is honest, predictable, and aligned. Revenue scales linearly with logos won; we keep our incentives clean.

7.1 Monetization model

SOURCE	TYPE	NOTES
Setup fee	One-time, non-refundable after go-live	Covers voice training, menu/calendar setup, integrations, staff training
Monthly subscription	Recurring via Stripe Billing	30-day money-back guarantee on monthly fees
Annual prepay	20% discount	Reduces churn, improves cash flow
Add-ons	Recurring or one-time	Ad campaign management, voice cloning, extra locations, POS integrations
Managed services	Per-engagement	Custom workflows, white-glove onboarding for Enterprise

7.2 Distribution & growth sequence

- **PHASE 1 • MONTHS 0-2**
NYPDQ live + 2 anchor tenants via personal network
Tribeca / Brazilian-NY community. One restaurant + one Âmagô/Origem clinic. Zero ad spend. Brutal feedback. Product hardening.
- **PHASE 2 • MONTHS 2-4**
Referral program (3 months free per tenant brought)
5-10 paying tenants. Case-study videos with NYPDQ. Quantified ROI ("recovered \$X in DoorDash fees, reactivated Y customers").
- **PHASE 3 • MONTHS 4-8**
Targeted outbound to qualified ICPs

Pizzerias, burger spots, cafés (high call volume). Aesthetic and dental clinics in BR-heavy zones. SDR or founder-led calls. 25–50 paying tenants.

● PHASE 4 · MONTH 8+

Paid acquisition once CAC is known

Meta + Google ads. SEO + content. Industry events. Scale to 100+ tenants and beyond.

7.3 Defensibility

- **Multi-tenant from day one** — all data tenant-scoped, RLS enforced. No technical debt blocking tenant #2.
- **Cross-channel identity unification** — same customer across voice/WA/SMS gets one profile. Few competitors solve this.
- **Auditable consent + DPAs** — legal moat that scales with regulation, not against it.
- **Aggregate dataset** — across tenants, anonymized insights become salable to FMCG, equipment vendors, real-estate landlords.
- **Vertical adaptation, not vertical companies** — Slang.ai is restaurants-only; Arini is dental-only. Guileo crosses verticals on day one.
- **Stripe Connect path to MUUH Pay** — when MUUH Pay launches, swap the connector and keep the rails.

8. Build Roadmap

What's already built, what's next, and what's deferred.

8.1 Already built (Phase 1 + 2)

DONE

Foundation

Multi-tenant Postgres schema · 13 tables · row-level security · analytical views · NYPDQ seed (full menu, locations, campaigns, audiences)

DONE

Channel ingestion

n8n omnichannel workflow · voice/WA/SMS routing · identity resolution · auto-grant essential consent · marketing engine (cron-driven)

DONE

B2B Dashboard

Next.js + Supabase Realtime · Overview KPIs · live order kanban · Customer 360 · campaigns · ad audiences pages

DONE

Privacy Portal

JWT magic-link · consent toggles · JSON data export · self-service deletion · DSR audit trail

DONE

Ad sync workers

Meta Custom Audiences · Google Customer Match · SHA-256 hashing · intelligence-consent gating · 6-hour cron

DONE

ML jobs

RFM segmentation · churn (gradient boosting + rule-based fallback) · LTV (BG/NBD + Gamma-Gamma) · daily pipeline

8.2 Next sprint (Phase 3 — to enable tenant #2)

PRIORITY	ITEM	WHY
P0	Brand refactor: Tribeca → Guileo + vertical naming	Public identity
P0	Self-service tenant onboarding wizard	Today adding a tenant requires SQL — blocks every new logo
P0	Stripe Connect Express + Stripe Billing	Money flow + SaaS subscriptions automated
P1	Twilio sub-account auto-provisioning	Per-tenant phone numbers and billing isolation

PRIORITY	ITEM	WHY
P1	Voice persona picker (3 options) at onboarding	Tenant chooses agent name + voice without dev intervention
P1	Clinic vertical schema additions (PHI fields, BAA flow)	HIPAA tier ready before clinic #1
P2	White-label theming per tenant subdomain	Each tenant gets nypdq.guileo.ai branded
P2	Menu PDF/image AI extraction (Growth tier feature)	Onboarding accelerator for restaurants

8.3 Deferred (Phase 4+)

- POS integrations (Toast, Square, Clover) — Scale tier feature
- PMS integrations (Dentrix, Eaglesoft, OpenDental) — Clinic Scale tier
- React Native kitchen tablet app
- WhatsApp Business template approval automation
- Recommendation engine in voice flow ("based on your last order")
- Outbound voice campaigns (NPS, reactivation, appointment confirmations)
- A/B testing framework for campaigns
- MUUH Pay swap-in for Brazil expansion
- Brazilian Portuguese vertical voice agents
- Slack/PagerDuty integration for tenant ops

9. Appendix

Operational notes, terminology, and reference.

9.1 Glossary

Tenant	A business (restaurant, clinic, salon) using Guileo AI as a customer.
Customer	The end-user calling/messaging the tenant. Every customer belongs to exactly one tenant.
CDP	Customer Data Platform — the unified data layer storing customer profiles, orders, events, and consents.
DPA	Data Processing Agreement — legal contract between tenant and Guileo authorizing data use.
DSR	Data Subject Request — when a customer asks to view, export, correct, or delete their data.
DSAR	Data Subject Access Request — specifically the "show me everything you have on me" request.
RLS	Row-Level Security — Postgres feature enforcing tenant isolation at the database layer.
RFM	Recency / Frequency / Monetary — classic customer segmentation framework.
LTV	Lifetime Value — predicted total revenue from a customer over a time horizon.
BAA	Business Associate Agreement — HIPAA-required contract when handling PHI.
PHI	Protected Health Information — patient data subject to HIPAA.

9.2 Operating principles

1. **Voice quality is non-negotiable.** If the agent sounds robotic or stutters, no other feature matters.
2. **Multi-tenant from day one.** Every table has a `tenant_id`. Every query filters by it. RLS is enforced, not optional.
3. **Consent is a feature, not paperwork.** The privacy portal is part of the product, not the legal department.

- 4. **The tenant owns the customer relationship.** Guileo never disintermediates the tenant. Customers always know who they're buying from.
- 5. **Adapter-first integrations.** Every external system (POS, PMS, ad platform) goes through an adapter so swap-ins (e.g. MUUH Pay) cost a day, not a quarter.
- 6. **Cost-per-call is a product metric.** Every call has a cost line item; we optimize this aggressively without compromising quality.

9.3 Contact

Operating company	Tribeca Global Inc. (Delaware C-Corp)
Product brand	Guileo AI
HQ	Cuiabá, MT, Brazil · with NY operations
Founder & CEO	Luis Guilherme Teles da Costa

This document is internal to Guileo AI / Tribeca Global Inc. and its prospective partners. All architecture and pricing details are subject to change as the product evolves.
